

Offshore Systems unveils new product: ACT (Asset Control and Tracking)

September, 2007
Vancouver, Canada

Offshore Systems Ltd. is pleased to announce the latest in cutting edge marine technology. ACT (Asset Control and Tracking) is a versatile and fully scalable solution based on terrestrial communications. Designed to allow the military or security services user to track a wide variety of assets, it enables close command and control in high tempo situations. The new product will be demonstrated at the Defence Systems and Equipment International Exhibition 2007 (DSEi) in London, September 11th-14th in booth 2180.

The new system has ECPINS[®] at its core, an International Maritime Organization (IMO) approved ECDIS that meets the NATO WECDIS STANAG 4564. The system can be deployed on sea, air or in land based units and addresses the unique demands posed by numerous operating scenarios including MIOPS, Amphibious Operations, Port Security and Riverine warfare.

“ACT builds on the success of our world leading product ECPINS, currently deployed in over 300 ships,” says Jim Davison, Director of Sales. “ACT enables existing or new ECPINS customers to meet a wide range of operational scenarios. Not limited to military organizations, ACT is a flexible solution with extensive application across other government departments as well.”

ACT can either be used as an addition to an existing ECPINS fit or as an extra standalone position onboard. In its portable configuration, it can be deployed onboard aircraft, vehicles or shore based command posts. The small craft version, ACT SC, features fully ruggedised hardware and a compact GUI with a simplified menu structure for use in the most demanding open craft employment.

About Offshore Systems Ltd.

Offshore Systems is a leading provider of marine electronics solutions. The company offers broad and versatile product lines including electronic chart systems for navigation and situational awareness, voyage data recorders and system components for bridge electronics. Over the years, defence and commercial customers have relied on Offshore Systems for its extensive experience and expertise in bridge and sensor integration with real-time display of electronic charts. As a result, the company has a worldwide customer base that has chosen their preferred products and services for innovative vessel navigation and bridge control solutions.

About OSI Geospatial

OSI Geospatial Inc. delivers advanced geospatial systems and software that enable shared real-time situational awareness for military, safety and security applications. Our products and services enable our customers to integrate and visualize live data with any combination of sensor data, imagery, maps and charts. This capability provides our customers with enhanced operational performance, safety and security through shared real-time situational awareness. OSI

Geospatial systems and software are in use by military, government, and commercial customers around the world. The company is publicly traded on the Toronto Stock Exchange (OSI) and the Over the Counter Bulletin Board (OSIIF). For additional information please visit www.osigeospatial.com.

Forward-Looking Statements

Certain statements made in this news release that are not based on historical information are forward-looking statements which are made pursuant to the safe harbor provisions of Section 21E of the Securities Exchange Act of 1934 and Section 138.4(9) of the Ontario Securities Act. These forward-looking statements are subject to risks and uncertainties. Actual results may differ from these projections. The risks associated with the Company's business include risks related to its reliance on international government contracts; the number of large customer transactions and the related lengthy sales cycles in executing those opportunities; uncertainties associated with competitive bidding processes and contract negotiations; actions by government authorities; the effects of general economic and political conditions; changing foreign exchange rates; and challenges related to the company's ability to introduce, develop and implement new products and enhancements to existing products that respond to customer requirements in a changing, complex, technological market. A complete discussion of the company's risk factors is presented in the company's most recent annual reports, filed with the United States Securities and Exchange Commission ("SEC") and the Canadian Securities Administrators ("CSA"), as well as other periodic reports filed with the SEC and the CSA. The Company does not undertake any obligation to update the forward-looking statements.
